School of Medicine and Health, Harbin Institute of Technology
Harbin, Heilongjiang Province, China

Undergraduate student

Relevant Research*

Preparation of dual-functional photothermal membrane and its applications in solar-driven water evaporation and off-grid sterilization 2023.11-now

Polydopamine-Coated Copper-Doped Co_3O_4 Nanosheets Rich in Oxygen Vacancy on Titanium and Multimodal Synergistic Antibacterial Study 2023.6-2024.4

*Relevant experiments are carried out in Key Laboratory of Microsystems and Microstructures Manufacturing, school of medicine and health.

Other Research

Multi-trajectory adjustable type carbon-free car 2020.1-2020.5

“By designing and manufacturing a mobile gravity potential energy buffering platform, the car achieves carbon-free movement. At the same time, simple mechanical structures are incorporated into the omni-directional wheels, making multi-trajectory adjustment possible.”

Medical big data analysis and text mining based on supervised machine learning

2022.11-2023.6

“By using traditional machine learning methods, research figures out whether Doctors’ online reply contains emotional support, and find out the most efficient way to analysis this task.”

Language Proficiency

International English Language Testing System (IELTS)

Academic 6.5 2023.3
